*PARTICLE-MEDIATED DELIVERY OF Antigens*  
~~METHOD FOR INDUCING IMMUNE RESPONSE~~

Abstract

5 A method for inducing an immune response in a  
mammalian animal includes the steps of coating an  
immunogenic peptide onto small, dense particles, and  
delivering the coated particles into target skin cells of  
the animal. The method is useful as a strategy for  
obtaining large quantities of specific diagnostic  
antibodies from laboratory animals and as a method for  
10 vaccinating animals or humans against foreign biological  
agents.
